

VX Nano Cordless Laser Mouse for Notebooks

Home Notebook Products Mice VX Nano Cordless Laser Mouse for Notebooks

Simplify life on the road with the ultra-portable Logitech® VX Nano Cordless Laser Mouse for Notebooks. It's always ready for use, thanks to the world's smallest USB receiver*. Plug it into your notebook's USB port just once, then forget about it. No more broken or lost receivers. No more hassles.

Overview

The World's Smallest USB Receiver

- **Plug-and-forget nano-receiver:** Barely larger than a coin, the receiver is so tiny you can plug it into your notebook just once – and forget about it.
- **Small, yet powerful:** Expect a robust wireless connection with advanced 2.4 GHz cordless technology.

Convenience

- **Always ready:** Leave the nano-receiver plugged into your notebook—your mouse is always ready.
- **Protective pouch:** Use the stylish pouch to protect your mouse when it's not in use.
- **Longer battery life:** Get up to 6 months of use (or longer with the convenient on/off switch).**

Ultra-Portability and Style

- **Ultra-portable mouse design:** So slim, it slips easily into your notebook bag.
- **Attractive style:** Complements your active lifestyle with an ultra-slim, sleek design.
- **Storable receiver:** Store the nano-receiver inside the mouse when you need to free up a USB port. Shuts down when stored, saving more battery life.

Control and Precision

- **Hyper-fast scrolling:** Fly through long documents at hyperspeed with the nearly frictionless scroll wheel, or shift instantly to precise scrolling.
- **Forward/backward buttons:** Effortlessly navigate the Internet with Forward and Back buttons.
- **Five programmable buttons:** Customize the mouse controls to fit your needs with included SetPoint™ software (or, for Mac® users, with downloadable Logitech® Control Center software).
- **Laser precision:** Experience smoother cursor control on virtually any surface.*** The VX Nano outperforms ordinary optical mice.

The nano-receiver represents the latest stage in the evolution of wireless receivers—a lineage that began with a corded desktop unit the size of a deck of cards.

Elevate the Power of Windows Vista™

* Based on 27 MHz USB receivers for notebook mice commercially available as of March 1st, 2007
 ** Battery life may vary, depending on user and operating conditions.
 *** Laser sensor does not work on mirrors or clear glass.

Note: For your convenience, the VX Nano comes with a USB extension stand that can sit on your desktop when you need to use the mouse with a docking station or a desktop computer. There's no need to reach behind a tower unit to plug in the nano-receiver.

Specifications

System Requirements

PC

- Windows® XP, Windows Vista™
- USB port
- CD-ROM drive

Mac

- Mac OS® X (10.3.9 or later)

 I've used this product:
One month to a year

Best mouse of many very good ones I've used.

Date: **June 23, 2009**

"Dating back to Microsoft's first hardware product - a very good mouse - I have used only good (pricey) mice for 20 years now. I feared that this mouse would feel too small in actual use, but it does not in my medium male hand. This mouse is responsive, accurate, and has a quality feel that is too often missing. Simply the best I have ever used."

The best. It is hands down worth every penny.

Date: **June 19, 2009**

"I have used computers since boot up was done with a floppy disk and WordPerfect ran off a floppy disk. I have used mice since they hit the market."

I have used Microsoft mice, Kensington mice, and a few others. You would think that a company as large as Microsoft would make some of the best products on the market, buy they don't.

There is a place in all mankind which I call the "stupid zone". I veer into that zone once in a while and I become stupid. I go into Best Buy or some other electronics store, leaving all sense of intelligence at the entrance door. I see a pretty mouse made by Microsoft and buy it. Within two to three months it stops working. I go back to the store and I buy another pretty mouse made by a big name company. (It takes me awhile sometimes to get out of the zone.)

I have had three Logitech mice since 1992. None of them broke down and they all worked as advertised. I have given two of these mice away when I step up to a new computer.

A year ago, or more, I donated a computer for a good cause and found myself miceless. I intelligently went in and after considerable thought purchased this mouse.

It is the best mouse I have ever used. I put the small receiver in and have not touched it since then. The mouse itself is flawless and other than replacing the batteries once in a while I have not had one problem with it. It comes with software so I can mess around with the settings. The software even indicates the life of the batteries. No more surprises.

My wife recently became so frustrated with her Kensington mouse she threw it across the room and uttered some words I haven't heard since I was in the Marine Corps. Her new mouse will be a logitech.

You cannot go wrong with this mouse. It is the best mouse I have ever used."

I've used this product:

More than a year

Only missing one thing...

Date: **June 18, 2009**

"This is the best mouse on the planet! However its lacking one small lil feature, BLUETOOTH!!! Why oh why has Logitech not made this in a Bluetooth version yet?! Are you listening Logitech!?"
